FOR IMMEDIATE RELEASE

Nichirei Corporation

Regarding System Failures within the Nichirei Group

Nichirei Corporation has begun the phased resumption of operations that had been affected by system failures caused by the cyberattack.

Currently, we are operating our refrigerated warehouses and food processing plants on a partial basis while placing some limitations on the acceptance and placement of orders with customers and business partners.

We are making preparations to return to normal operations at all locations, aiming to achieve this sometime next week.

<Operations Affected>

- Inbound and outbound operations at refrigerated warehouses of Nichirei Logistics Group
- Frozen food shipment operations of Nichirei Foods Inc.

Since the day the incident occurred, we have taken measures to disconnect the systems used by the Nichirei Group, established an emergency response headquarters, and have proceeded with investigations and countermeasures in cooperation with an external cybersecurity specialist firm.

As of today, we have begun the phased resumption of inbound and outbound operations at all refrigerated warehouses and frozen food shipment operations.

We are continuing to investigate the cause of this incident and the full scope of its impact.

We sincerely apologize for any inconvenience caused to our stakeholders.
